Dr. Michael Yeadon is the former Vice President and Chief Scientific Advisor at Pfizer. He and [Dr. Wolfgang Wodarg](#) filed a [petition with the European Medicines Agency](#) on December 1, 2020. The petition asks the agency to halt trials for the Pfizer BioNTech BNT162b shot and all other mRNA trials until study designs conform with more universal methods.

One of their concerns involves Syncytin-1. The protein is responsible for placenta development during pregnancy.

Placentas provide oxygen and food to fetuses. They also eliminate waste from the baby. Syncytin-1 is “also found in homologous form in the spike proteins of SARS viruses,” according to the petition. The mRNA shots would thus inhibit or eliminate Syncytin-1, and prevent or obstruct pregnancy.

Further, according to Section 10.4.2 of the [Pfizer BioNTech trial protocol](#), pregnant women or women who may become pregnant should not take the mRNA shots. Section 10.4.1 also warns men taking the mRNA shots to “be abstinent from heterosexual intercourse” and to not donate sperm.

Despite all these clear warnings, people are lining up and getting these shots to conform with social media and mainstream media norms. Medical professionals are not immune to said social pressures.

The Dr. Sara Beltrán Ponce public miscarriage

Dr. Sara Beltrán Ponce graduated from the Medical College of Wisconsin in
Translate » is completing her residency in Radiation Oncology at the same

Milwaukee college. Her profile on a [website called SheMD](#) says she is “passionate about medical education, public health, and mentorship, particularly for women interested in radiation.” She is married with one daughter and had another child on the way – until yesterday.

Dr. Beltrán Ponce [tweeted on January 28](#) that she is 14 weeks pregnant and “fully vaccinated.” She repeated many of the most common talking points related to COVID-19 and vaccines in the tweet chain.

She [tweeted an update](#) about her pregnancy less than a week later (NOTE: There is a narrative on social media channels about some sort of “fake photo” in Dr. Beltrán Ponce’s tweets. The narrative appears to attempt discrediting the story or deflecting from the facts. We’ve linked the internet archives herein for readers to see the actual tweets and screenshots).

The miscarriage happened at 14 1/2 weeks, indicating it was three days after she got the first or second mRNA shot. She did not say if it was the Pfizer or Moderna shot. Dr. Beltrán Ponce has since locked her Twitter account so only verified followers can see her tweets.

Directly from a vaccine industry trade publication...

"COVID-19 vaccine candidates lack efficacy data on pregnant women and children." But that's not stopping the criminal medical industry from vaccinating the pregnant and their unborn child(ren).

So clearly children and pregnant women will be unwitting participants in this criminal vaccine experiment.

CDC's Vaccine Committee Prepares COVID-19 Vaccine Allocations

Ich bete für die junge Mutter und ihre Familie und das Menschlein, das kommen wollte!

Leider bin ich mal wieder so was wie sprachlos über all das was vor aller Augen z. Zt. an Ungeheuerlichkeiten durchgezogen wird, stattfindet! Erschreckend wie schnell und leicht ca 67% & >% der Menschen aus Angst und Panik in die Irre geführt werden und leider sehr viele, Täter und Opfer den Weg daraus nicht mehr finden, wagen, wohl auch aus Scham & Angst! Ich bin sooo traurig und wütend und..... bitte, bete um ein Wunder, 🙏🌿🌳 wie 1989 und.....! Sie verlieren ihre Gesichter, solches führt zu ernsthaften Konsequenzen für jeden Einzelnen und auch für die Menschheit, die Gesellschaften!

I encourage everyone to write to the Medical College of Wisconsin and ask some questions about their curricula and data on pregnancy and vaccination. Dr. Beltran is a true believer – in allopathic claptrap. It cost her a baby. Maybe she will wake up? Or maybe this will deepen her faith in her pharmaceutical overlords. The quicker that we rid the planet of these vultures, the safer and healthier humanity will become.

Capt. Hook ⌚ 2 hours ago

She drank the koolaid and lost her baby.

Doctors need to be proactive w covid...see, evaluate, treat and follow patients to conclusion of the disease.

A strategy never espoused or even commented by the infamous Fauci.

All patients should be informed prior to vaccination that infertility maybe impaired, including males.

All reproductive age patients should have a pre vaccine pregnancy test.

This doctor should have done her due diligence on the vaccine.

Moderna and Pfizer are indemnified from law suits, but the univ of Wisconsin is not.

I see huge lawsuits on these facilities which have not been indemnified
